

Análisis de coyuntura

- El peso cerró abril cotizando en 17.46 por dólar, con una apreciación mensual de 2.62%. En 2026, las exportaciones de equipo de cómputo son el principal impulsor de exportaciones de México, sin impulsar el empleo ni la inversión. En los primeros dos meses, las exportaciones totales crecieron 12.15% anual, y el equipo de cómputo 155.54%.
- Dado el debilitamiento de las instituciones en México, se manifiesta la caída en la inversión y al aumento de la informalidad, con caída de la productividad que perpetúa el bajo crecimiento. En contraste, en los EEUU el PIB se aceleró en el primer trimestre de 2026, con desarrollo de centros de datos (28.8 mil millones de USD). En cambio, los factores que llevaron a la caída del PIB de México son netamente internos.

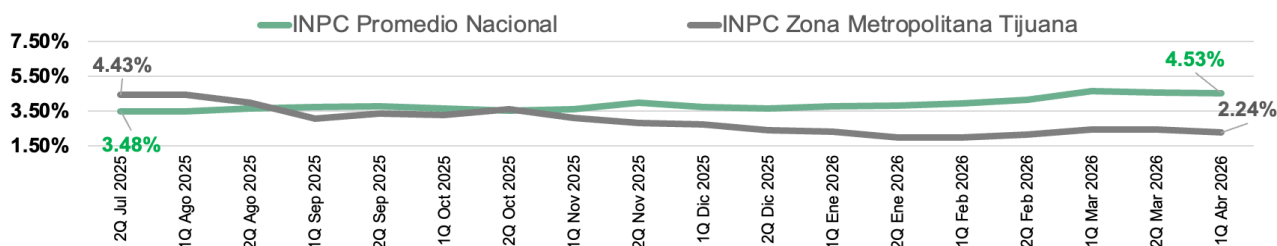

Situational analysis

- The peso closed April trading at 17.46 per dollar, marking a monthly appreciation of 2.62%. In 2026, computer equipment exports serve as the primary driver of Mexico's export sector, yet they fail to stimulate either employment or investment. During the first two months of the year, total exports grew by 12.15% year-on-year, while computer equipment exports surged by 155.54%.
- Given the weakening of institutions in Mexico, a decline in investment and a rise in economic informality have become evident—trends accompanied by a drop in productivity that perpetuates low economic growth. In contrast, GDP growth in the United States accelerated during the first quarter of 2026, driven in part by the development of data centers (totaling \$28.8 billion USD). Conversely, the factors responsible for the decline in Mexico's GDP are entirely domestic in nature.
